HSI color space segmentation based on experimental data concerning human 11 color categories

Recall & Precision of 4 CBIR systems

Shape extraction by pixelwise classification

Human color and texture categorization/classification

Parallel-sequential colorful texture analysis
  - Optimal utilization of color information by human 11 color categories
  - Color histogram and Color correlogram combined
  - 94% correct classification
  - 91% decrease in computational complexity

Image segmentation by agglomerative merging

CBIR Benchmark
