Stereochemical Control in Cyclisation to Bicyclic Dioxolanes
Michael J. Begley, Rodney J. Fletcher, John A. Murphy and Michael S. Sherburn

The sentences that appear in parentheses in the penultimate paragraph should read as follows.

[The cis isomers of these products show a characteristic apparent triplet for H*. Examination of models shows that this proton has a small dihedral angle of ca. 0° to Ht. This is in contrast to the trans isomers, which show a doublet for the corresponding proton, resulting from dihedral angle of ca. 90°.]

Approaches to the Assembly of the Antifungal Agent FR-900848: Studies on the Asymmetric Synthesis of Bicyclopropanes and an X-Ray Crystallographic Analysis of (4R,5R)-2-[(1R,3S,4S,6R)-6-Phenyl-1-bicyclopropyl]-1,3-dimethyl-4,5-diphenylimidazolidine
Anthony G. M. Barrett, Wendel W. Doubleday, Gary J. Tustin, Andrew J. P. White and David J. Williams

The ORTEP plot for compound 8 was inadvertently missed from this communication and now appears below.

Tuning the Supramolecular Expression of Chirality: Phospholipid Analogues containing Amide Linkages

The correct structures and CPK models for compounds 1 and 2 are shown below. The corresponding illustrations in the graphical abstract should be amended accordingly.
