The role of inhaled corticosteroids (ICS) in the long-term management of COPD is still unclear. Therefore, we performed a meta-analysis of the three-year studies published on this subject (Kerstjens et al: N Engl J Med 1992; 327: 1413-9, Renkema et al: Am J Respir Crit Care 1995; 151: A463, Renkema et al: Chest 1996; 109: 1566-62). Patients with "asthmatic features" were excluded by analyzing the original data. The effect on FEV1 was assessed by a multiple repeated measurement technique in which time and drug effects were investigated. The role of inhaled corticosteroids (ICS) in the long-term management of COPD is still unclear.
